

Bio: Robert Tremlett

Formerly a Master Mariner and Flight Engineer, serving on crude oil and product tankers, container ships, geared and gearless bulkers, passenger, cable layers, 85 knot hovercraft and probably the most unusual, mine sweeping and convoy navigation in the gulf aboard adapted support vessels with US Navy mine countermeasure personnel. It is be true to say, his sea experience included the largest, fastest and most dangerous commercially operated vessels afloat.

Having pushed the boundaries afloat he came ashore and found his way using his operational and technical knowledge to support and advise institutions and industry alike for the evolution of surveillance, traffic monitoring, communication, navigation, VTS and both wide and local area situation awareness. He is still pushing boundaries!
