

# ELoran and Amateur Radio - A Study in Co-existence

**Dr Paul Williams** (The GLAs of the UK and Ireland)

**Professor David Last** (Consultant to the GLAs)

**Dr Nick Ward** (The GLAs of the UK and Ireland)

$$y_2(t) = \frac{1}{16N} \sum_{n=1}^N \left\{ \sum_{m=1}^{16} [x_{int}(t) * \delta(t + t_m + t_n) pc(m)] \right\} \quad (8)$$

In order to evaluate  $y_2(t)$ , we take the Fourier Transform of both sides of equation (8) (see [18] for details). The attenuation of the CWI due to phase-decoding and integration can therefore be obtained by taking the modulus of the division of  $Y_2(f)$  by  $X_{int}(f)$

$$Rejection(f_{int}) = R_1(f_{int}) R_2(f_{int}) \quad (9)$$

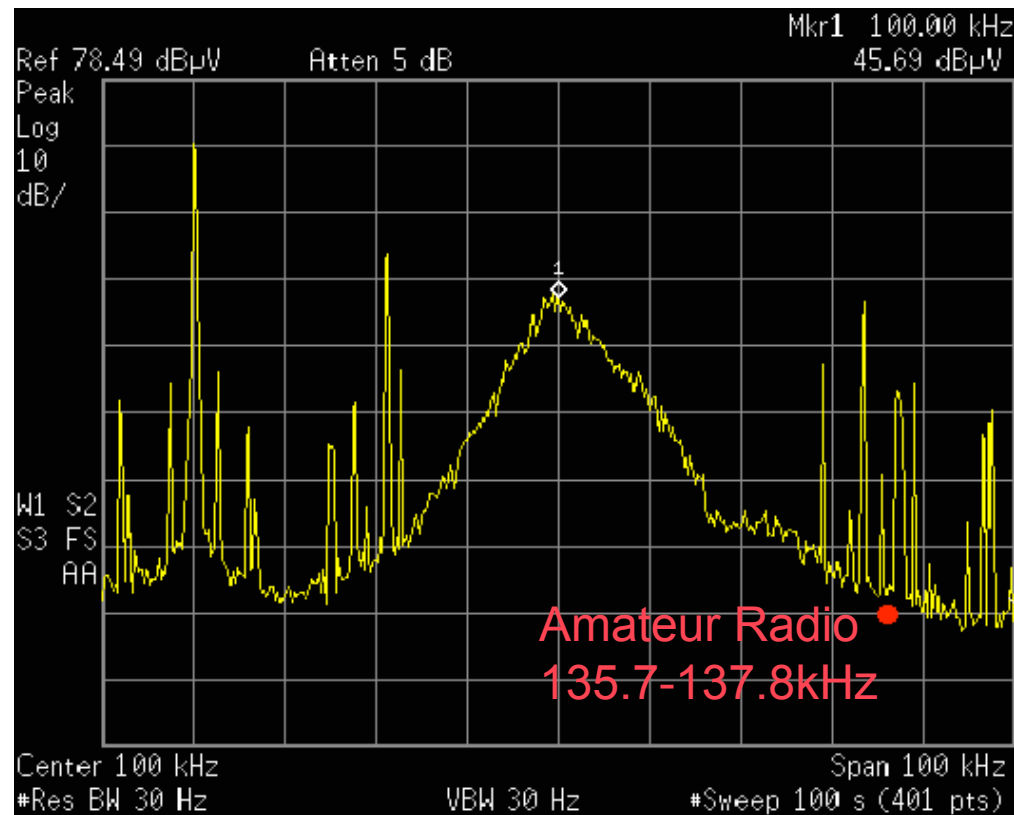

$$R_1(f_{int}) = \left| \frac{1}{N} \sum_{n=1}^N \exp(+j2\pi f_{int} t_n) \right| \quad (10)$$

where

$$R_2(f_{int}) = \left| \frac{1}{16} \sum_{m=1}^{16} \exp(+j2\pi f_{int} t_m) pc(m) \right| \quad (11)$$

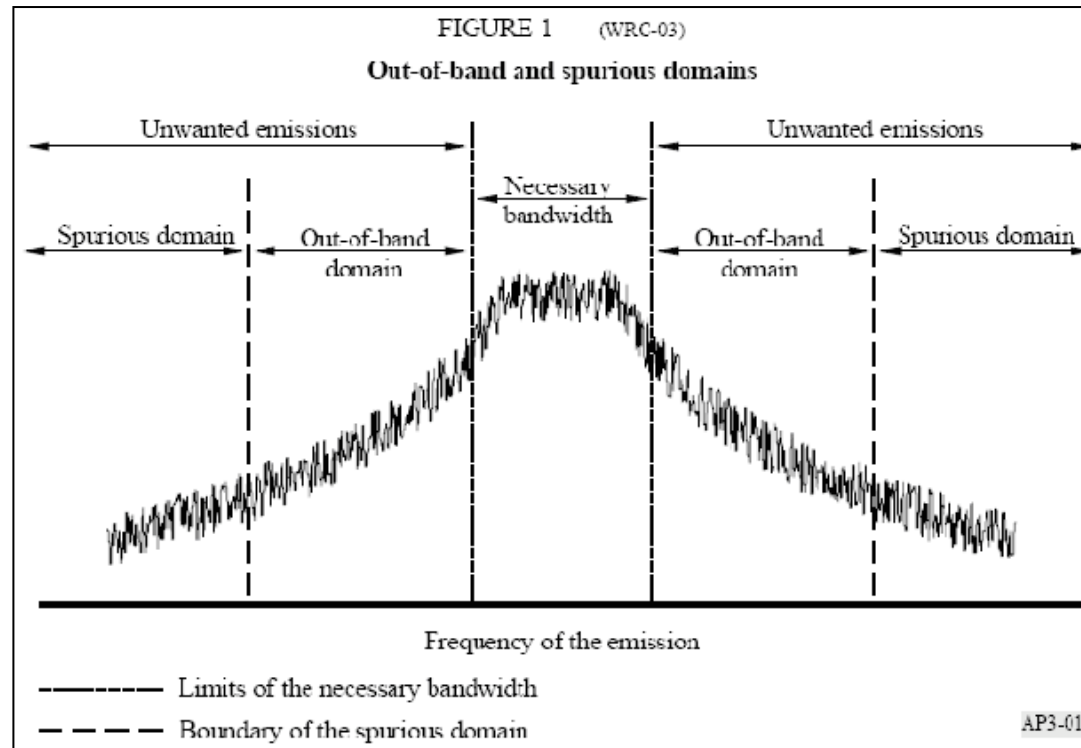

Carrier-wave interference with Loran

Spectrum from 50kHz -150kHz

ITU Radio Regulations, Volume 1, Chapter 1, 'Terminology and Technical Characteristics', 2004

Spectrum from 50kHz -150kHz near Anthorn

Spectrum from 135kHz -139kHz near Anthorn

100Hz-wide slice of spectrum at 100kHz near Anthorn

100Hz-wide slice of spectrum at 137kHz near Anthorn

Loop antenna rotated through 90 degrees

Groundwave propagation curves (from ITU 368-7)

	Field strength	Radiated power
Single spectral line	6dB $\mu$ V/m	50 $\mu$ Watt
Whole amateur band (284 spectral lines)		14mWatt

Radiated power from Anthorn in Radio Amateur Band

- Entire band only 2.1kHz wide
- Data transmissions or V-E-R-Y S-L-O-W Morse code
- Each dot 3-30 seconds, each dash 9-90 seconds
- Bandwidth less than 1Hz
- Visual reception

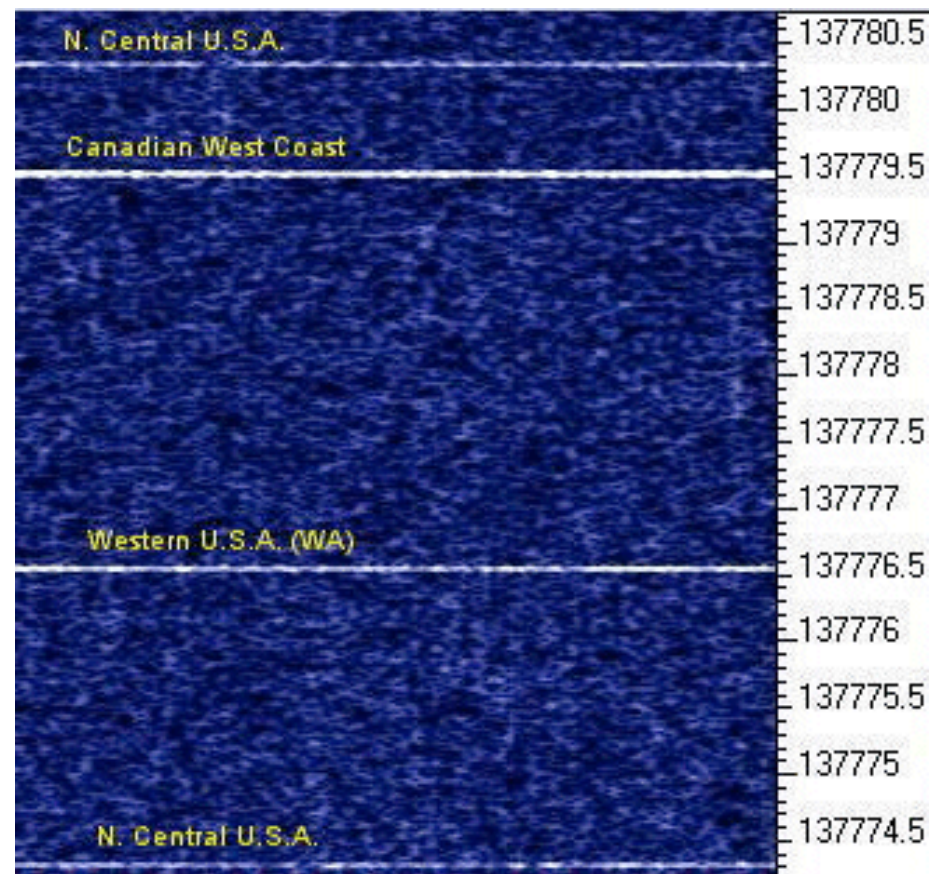

Amateur Radio techniques at 136kHz

Waterfall diagram (from <http://jpmere.online.fr/Grabber/Grabber.htm>)

US Loran spectral lines (from <http://www.imagenisp.ca/jsm/136.html>)

**S52AB's callsign - his QRSS3 transmission was less than 1 Hz from a Rugby Loran line, but I was still able to give him a report of 'O' (perfectly readable).**

**This is my signal as received in Slovenia. S52AB gave me an 'M' report (readable with difficulty). Note that he does not have QRM from Loran.**

Reception less than 1 Hz from a Rugby Loran spectral line  
(from <http://homepage.ntlworld.com/mike.dennison/index/lf/gallery/s52ab.htm>)

## ANC-4 Antenna Noise Canceller & Diversity Combiner

The Perfect Complement to Timewave's DSP-599zx!

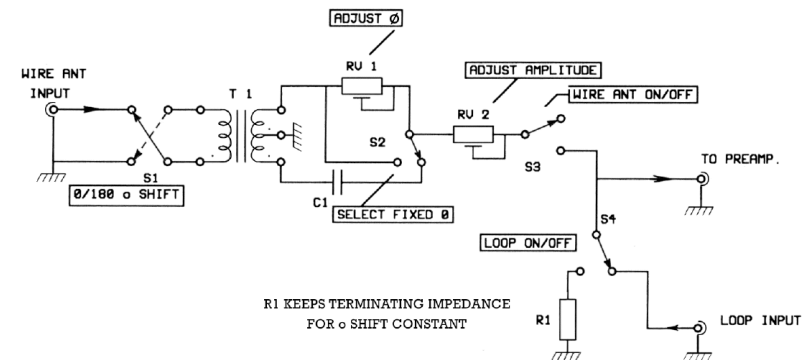

### Features

- Cancels S-9 line noise
- Reduces BPL noise
- Nulls strong interfering signals
- Works with any transceiver/receiver
- Makes 2 antennas into phased array
- Wipes out noise before it hits your receiver
- Up to 40 dB Reduction of interference generated by powerlines, electric motors, TV's and home electronics
- Works for voice, data & CW
- 250 Watt rating

## A Simple Signal Canceller For 136Khz To Combat Loran or Other Noise Sources

by Derek Atter G3GRO

FIGURE 1  
BASIC CANCELLER

## Techniques for combating Loran!

(from <http://www.timewave.com/support/ANC-4/anc4.html> & <http://www.carc.org.uk/assets/Downloads/vlffilter.pdf>)

- Anthorn's Loran signal is correct
- No spurious transmissions in the amateur band
- Just 50 $\mu$ Watt per spectral line
- Lessay, Ejde and Sylt pre-date Anthorn
- Effective techniques to combat Loran
- But still ...
